SKILLS

Languages: Rust, Python, Go, JavaScript, Ruby, C, C++, Java, Kotlin, C#, F#, Swift

Technologies: Kafka, Parquet, Svelte, React, React Native, SQL, Rails, MongoDB, Node.js, PyTorch

Tools: Git, Datadog, Docker, Kubernetes, GitLab CI, Bazel

EXPERIENCE

Software Engineer

Datadog

Aug 2022 – Present

Backend Developer Intern

Shopify

Sept 2021 – Dec 2021

- Worked in the Commerce Trust and Integrity Team to improve the detection and management of bad actors among merchants.
- Sped up an internal website used by analysts for managing non-compliant and fraudulent merchant tickets by better utilizing Elasticsearch's API and various Rails optimization techniques.

Software Engineering Intern

Datadog

May 2021 – Aug 2021

- Designed and wrote an internal tool using Rust to record, store, and replay real-world loads from the team's services for debugging or load-testing purposes to speed development.

Software Engineering Intern

Wish

Sept 2020 – Dec 2020

- Improved the success rate of a product check-in process using barcodes by nearly 2.5 times, while also optimizing the worst-case scenario from 24 seconds down to just 2 seconds.
- Used Python and React Native to implement the backend and frontend for new stores to use to set details about themselves.

Software Engineering Intern

Wish

Jan 2020 – Apr 2020

- Created a new package check-in system for stores in Python and React Native, streamlining the process for users and completely automating refunds for lost packages.
- Implemented a new product management system for stores to search and edit listed items.

Software Developer – Full Stack

YuJa

May 2019 – Aug 2019

- Implemented an internal management console using Vue.js and Node.js to easily control parts of a service from a web interface.
- Completely redesigned a document conversion service using C#, producing better-looking results while also decreasing the conversion time per file from 20 seconds to 4 seconds.
- Designed and implemented a responsive browser document reader with accessibility tools, such as OCR and text-to-speech, using Vue.js.

PROJECTS

bottom

- Used Rust to create a lightweight, configurable, and cross-platform terminal application for graphically displaying resource usage and process management, inspired by tools like htop.

EDUCATION

University of Waterloo

Bachelor of Computer Science with Distinction

Sept 2017 – Apr 2022
